

Workshop on Vacuum extension diagnostic systems, from design to operation

Monday, 30 October 2023 - Tuesday, 31 October 2023

Book of Abstracts

Contents

Welcome Message	1
Workshop description	1
Design of the baking jacket for 55.E5 XRCS Core	1
Vacuum extensions: relevant aspects of loads definition, engineering analysis and integrity assessment	1
Universal circular bellows conceptual design for XRCS edge & survey	1
Introduction to SJM, a bellows specialist company	1
Design and development of the bellows for vacuum extension pipes of ITER VUV spectrometers	1
Status of double wall safety bellows based rotary feedthrough development	1
Implementation of a maintainable vacuum extension in the ITER Port Cell environment	2
Installation strategy of PortPlug - ISS and PCSS for Port with vacuum extensions	2
Technical Specifications of the pipes in-bore cutting and welding tool	2
ISS disconnection strategies	2
Foreseen maintenance operations to be held in L3 of the Hot Cell Complex	2
Status of R&D for Diamond based X-ray filter	2
Development of electrical feedthrough for Radial Xray external camera	3
VAT Valves qualification (temporary title)	3
Grounding scheme guidance for vacuum extensions	3
Guidelines for preparing the Concept of Operation for diagnostics systems	3
System commissioning and integrated commissioning	3
JET return of experience	3
Coffee break	3
Open discussion: open issue to address, design/development needs, actions to follow-up	3

Welcome Message

2

Workshop description

Corresponding Author: raphael.tieulent@iter.org

3

Design of the baking jacket for 55.E5 XRCS Core

5

Vacuum extensions: relevant aspects of loads definition, engineering analysis and integrity assessment

6

Universal circular bellows conceptual design for XRCS edge & survey

7

Introduction to SJM, a bellows specialist company

8

Design and development of the bellows for vacuum extension pipes of ITER VUV spectrometers

9

Status of double wall safety bellows based rotary feedthrough development

10

Implementation of a maintainable vacuum extension in the ITER Port Cell environment

12

Installation strategy of PortPlug - ISS and PCSS for Port with vacuum extensions

13

Technical Specifications of the pipes in-bore cutting and welding tool

14

ISS disconnection strategies

15

Foreseen maintenance operations to be held in L3 of the Hot Cell Complex

16

Status of R&D for Diamond based X-ray filter

17

Development of electrical feedthrough for Radial Xray external camera

18

VAT Valves qualification (temporary title)

19

Grounding scheme guidance for vacuum extensions

20

Guidelines for preparing the Concept of Operation for diagnostics systems

21

System commissioning and integrated commissioning

22

JET return of experience

23

Coffee break

24

Open discussion: open issue to address, design/development needs, actions to follow-up

Corresponding Author: raphael.tieulent@iter.org
